

**case-14:** If an exception raised at stmt-11 or stmt-12 then it is always abnormal termination.

**Note:** If the control entered into try block then compulsory finally block will be executed. If the control not entered into try block then finally block won't be executed.

### else block with try-except-finally:

We can use else block with try-except-finally blocks.  
else block will be executed if and only if there are no exceptions inside try block.

try:  
    Risky Code  
except:  
    will be executed if exception inside try  
else:  
    will be executed if there is no exception inside try  
finally:  
    will be executed whether exception raised or not raised and handled or not handled

#### Eg:

```
try:  
    print("try")  
    print(10/0)--->1  
except:  
    print("except")  
else:  
    print("else")  
finally:  
    print("finally")
```

If we comment line-1 then else block will be executed b'z there is no exception inside try. In this case the output is:

```
try  
else  
finally
```

If we are not commenting line-1 then else block won't be executed b'z there is exception inside try block. In this case output is:
